DUAL FLUSH TANK 2/4 LITERS

FEATURES

Pheasants offers a space-saving design with a sturdy flush tank designed for wall mounting. It works with various flush drain and toilet systems. With its distinct design and dual-button operation, users can adjust water usage to their needs. Button 1 releases 2 liters of water for regular use, while button 2 releases 4 liters for heavier use.

WATER CONSERVATION

We must conserve water to ensure its availability for future generations, ensuring that we don't deplete it faster than nature can replenish it. Various areas, such as industry, agriculture, and sanitation, can reduce water consumption, highlighting the urgency of limiting our usage to preserve water applications.

FAUCET WITH LOW SOLUTION KIT

FEATURES

Pheasants introduces its versatile faucet and extended kit, designed to transform water into fine droplets for precise water flow control. Our adjustable nozzle can release water at a rate of up to 0.35 GPM, tailored to suit various applications. The flow of fluid is influenced greatly by temperature and pressure conditions. To ensure optimal performance, we recommend providing us with the pressure reading at the installation outlet, enabling us to customize our nozzle according to your needs..

WATER CONSERVATION

It's crucial to conserve water for the sake of future generations, ensuring that we don't deplete it faster than nature can replenish it. In various sectors, there are opportunities to reduce water usage, making it essential for us to limit our consumption in industries, agriculture, sanitation, and other areas to preserve as much water as we can.

LUXURY FAUCET WITH LOW FLOW NOZZLE

FEATURES

Pheasants introduces its adaptable faucet featuring a low-flow nozzle designed to regulate the water flow by converting it into fine droplets. Our nozzle can be customized to release water at a flow rate of up to 0.35 GPM, depending on the specific usage. The flow of fluid is significantly influenced by temperature and pressure variables. It's recommended to inform us of the pressure readings at the outlet where the faucet will be installed so that we can tailor our nozzle accordingly. Adjusting the lever to the left or right controls the flow of cold and hot water, respectively.

WATER CONSERVATION

We must conserve water to ensure it's accessible for future generations without depleting it faster than nature can replenish it. By reducing water usage in various sectors like industry, agriculture, and sanitation, we can save as much water as possible.

TECHNICAL DETAILS
